FOOTWEAR AND APPAREL ICONS

AXELER

Diadora's revolutionary new system that facilitates the natural movement of the foot, improving player performance. Axeler Technology features a thread-like frame in Tech Alloy, a special harmonic steel wire that is flexible, tough and extremely light weight. This frame is inserted into the sole, increasing forefoot flexibility while ensuring maximum stability along the sole and heel area.

AXELER TI

By introducing Nanoflex®, an innovative material that combines titanium and molybdenum components, Axeler further improves upon an already exceptional technology. Axeler's re-engineered shape and materials provide greater spring-back elasticity. Therefore, increasing flex and reactivity. Thus, the elite player will experience increased acceleration, jumping, and turning.

AXELER HEEL PROPULSION

Guarantees maximum shock absorption in the heel area while limited midsole torsion.

DOUBLE ACTION

This exclusive Diadora system optimizes performance and protection. A gummy elastomer in the heel area absorbs shock while a highly flexible elastomer in the forefoot boosts forward thrust, enhancing flexibility and dispersing sole pressure for improved performance.

DOUBLE ACTION 2 PLUS

The Double Action shock absorption has been improved and made "three-dimensional." The back part in elastomer ends with four "pistons" inserted directly into the back studs. This solution absorbs negative vibration at point of impact. The front part gives more power to the push in the front part of the foot.

ERGOS SL/PLAST

Very light and flexible because of the sock-like construction with no lasting board allows the foot to feel the full cushioning features of the Ergos footbed.

ERGOS NP

Ergos N.P. is the anatomic footbed that is composed of 2 layers of material. The nylon material in the rear foot provided needed rigidity for stability. The polypropylene material in the forefoot increases flexibility.

KANGAROO LEATHER

Constructed of premium, full grain kangaroo leather.

ENGAGE INSOLE

Anatomic insole featuring Dupont's exclusive Engage material that offers exceptional flexibility and is extremely lightweight. Engage assures maximum comfort, shock absorption, and reduces foot perspiration problems through a sanitized anti-bacterial treatment.

MORPHO CAGES

Morpho Cage S is the particular heat-sealed cage made from soft TPU, and directly applied to the internal side of the upper, guaranteeing perfect closure and evenly distributing pressure on the foot, while improving foot stability during thrust phase thanks to the integration with sole and upper.

FLEX-ROTAx SYSTEM

Circular positioning of the studs in the forefoot facilitates turning in all phases of play with special studs to ensure traction. Multi-density outsole provides stability in the arch and heel, and strategic forefoot grooves allow exact forefoot flexion.

SUPER3LPRO

SuprelPro3L is made from a special microfiber integrated with the external surface (upper) and the upper internal lining into a single structure.

FIBER TECH LASTING BOARD

An extremely lightweight lasting board composed of webbed nylon and contains flex grooves in the forefoot for flexion.

MICROFIBER

Microfiber guarantees maximum lightness and sensitivity.

REMOVABLE ANKLE

Removable ankle pad for use with and without

HIGH GRIP ZONE

The special lining, consisting of a smooth upper part and a textured lower part, guarantees perfect grip between foot and shoe reducing pressure areas and preventing microtraumas due to rubbing.

NET BREATHING SYSTEM™

The synthetic fiber net and the special breathable, waterproof membrane of the sole improve breathability while keeping feet dry and moisture, mud and debris out of the shoe.

TOUCH CONTROL

A special application on the upper optimizes ball control. An extremely lightweight lasting board composed of webbed nylon and contains flex grooves in the forefoot for flexion.

TOUCH COUNTER

Touch Counter is a special ergonomic support in the heel area for improved grip and ball control at the back of the shoe.

MICROBE BARRIER

Special anti-bacterial treatment applied to the internal shoe fabric. The bactericide treatment stays after several washes.

WOMAN'S LAST

Shoe developed on a last which reflects the specific ergonomics of the female foot.

EVS

Diadora's Engineered Venting System (EVS) technology allows the garment to "breathe". Air vents and mesh are strategically placed, to ventilate the areas where the body produces the most heat.

DIADRY

Diadry fabrics are engineered to perform according to the needs of today's player. DiaDry's technically advanced fibers and finish enable moisture to be transported away from the body to the outer surface of the garment, where it quickly evaporates.

WEATHER RESISTANT

Specifically treated fabrics protect players from the elements.

FIFA APPROVED

The "FIFA Approved" mark means that the ball has passed 7 tests assuring the highest quality.

FIFA INSPECTED

The "FIFA Inspected" mark means that the ball has met all necessary criteria for professional use in training. Tests include circumference, weight, rebound, and water absorption.

SEALED SEAMS

All seams are completely sealed so that water does not enter through.

SEAMLESS CONSTRUCTION

The garment has no seams allowing for the best comfort and excellent fit; wrapping around the body for a "nude" feel.

WOMEN'S FIT

POWER FLOW

Innovative ventilation system composed of a series of side holes directly connected to the area of the insole and of holes in the medial area ensuring good ventilation and breathability of the foot while running. In case of rain, the holes also act as drainage points for water from the inside of the shoe.

MADE IN ITALY
